MEMORANDUM FOR: Acting Deputy Chief, Real Estate and  
Construction Division, OL

SUBJECT : Pollution Abatement in Certain Building  
in the Metropolitan Washington Area

STATINTL 1. For your information I have given [REDACTED] the following instructions:

a. Pollution abatement should generally be regarded as GSA responsibility.

STATINTL b. Re NPIC - He is to contact [REDACTED] at NPIC and  
advise the name of the individual at Charlottesville for whom we are obtaining  
a liaison clearance and request that NPIC contact Mr. Swanson, Navy Yard  
Group Manager for GSA, requesting that he ask EPA to conduct a survey

STATINTL [REDACTED] Prior to this action, however, it will be necessary for NPIC  
to fill out forms provided by the Water Quality Control people. These forms  
STATINTL should be handed to [REDACTED] who should be requested to make these  
forms available to the geological survey people in order that they might  
provide information for their portion of the building.

STATINTL (1) With respect to 2430 E Street, the same method should apply.  
I would anticipate that [REDACTED] would handle this with  
State group (Mr. Beachum).

STATINTL (2) With regard to PSD, [REDACTED] should work directly with  
STATINTL [REDACTED] They are in a position to fill out forms prepared  
based on "in-house" analysis that they have done. [REDACTED] should STATINTL  
check and see if Mr. J. van O. Weaver would agree to levy this requirement  
on the Charlottesville office of Water Quality Control.

2. I should think we could get the entire program cranked up during the first  
two weeks in June.

[REDACTED]

MEMORANDUM FOR THE RECORD

SUBJECT: Pollution Abatement Activities--Water Pollution

1. On 11 May 1971 I discussed with Mr. George W. Williams of the Environmental Protection Agency, Water Control Office, our interest in surveying our industrial waste systems. He said he would probably be the individual who would make the survey if we requested one, and therefore gave me the data with which to obtain a contact clearance. (See separate clearance request.)

2. He will also mail us several copies of the questionnaire form which is normally filled out by the facility occupant prior to starting the survey. He said they would be glad to assist us if and when we wish to survey our Washington facilities. He has in the past already visited the Main Headquarters Building primarily in connection with waste water from the somat machines and the water bleed off from the cooling towers. Thus far, he has not had any contact with our Printing Services Building at Headquarters.

3. NOTE: Questionnaire forms were received 17 May 1971.
